

Did you know that you have the right to refuse to dissect animals in Alberta?

It's true! Each year, countless animals (including frogs, cats, and fetal pigs) are cruelly killed and then cut up in classrooms across the country—even though humane alternatives exist. Studies have shown that students who use alternatives to dissection perform just as well as—if not better than—students who cut up animals. You don't have to dissect animals! Explain to your teacher that you won't be dissecting and that the curricula [Biology 20–30, revised 2009] give you the right to say “No!” to cutting up animals in Alberta:

Students will ... observe the principal features of a mammalian brain, eye, and ear, using models, computer simulations or dissections, and identify the major structures of those organs.

Dissection is unnecessary and cruel. Stand up for animals, and exercise your rights. Choose not to dissect.
